Aragon Maestro: User Interface Guide

This guide explains the Maestro's web page: what each menu item and section does and where to find it. It is written for you and for AI assistants that answer questions about Aragon. The names in **bold** are the words shown on the page in English; the page also exists in German and French (menu **LANGUAGE**).

It describes the page of Aragon Maestro 2.6.4. It is updated when the page changes.

Opening the page

Where you are	What to open
At home	Type `find.heyaragon.com` in the browser and enter your network (for example `192.168.1.`). The search lists the Maestro; click it. You can also type the Maestro's IP address directly.
Away from home	With **Remote Connection** set up (menu **SYSTEM**), open the Maestro's Tailscale address.

The page has a menu bar at the top and one long page below it. Menu items either jump to a section of the page, open a dialog, or open a separate page in a new tab.

The menu bar

VOICE CONTROL

Item	What it does
See what's heard	Opens a page that shows what Aragon heard and how it understood it. Useful when a command is not carried out.
Voice Commands Guide	Jumps to the section **USE**: example commands for lights, blinds, scenes, music and Super Scenes, with short videos.
AI Assistant (Q&A)	Jumps to the questions, tasks and reminders you can ask the on-board AI assistant.
Train new words	Teaches Aragon the names of your rooms, devices and scenes. Run it after you add or rename a room or device in the gateway. It takes a minute or two. You can include SONOS favorites.
Troubleshoot	Jumps to the section **TROUBLESHOOT**.
Restart Voice App	Restarts the voice application without restarting the Maestro. The first thing to try when voice control stops reacting.
Set rapid or thoughtful	Sets how long Aragon waits for you to finish speaking (**Thoughtfulness**). Suggested: experienced 0-1, average 1-3, beginner 2-4.
Fine-tune Recognition	Sets the **Confidence Threshold** of the on-board speech recognition (0.8-0.85 recommended; lower is faster, higher is more accurate). Not used while **Always use cloud AI** is on.

AUTOMATION

Item	What it does
Super Scenes	Jumps to the section **SUPER SCENES** (Good Morning, Good Night, I'm home, I'm leaving).

Item	What it does
Home Automation Rules	Jumps to the section **HOME AUTOMATION RULES**: timed rules written in plain language.
Presence Monitoring	Opens the presence monitoring page in a new tab.
Sound Event Charts	Opens the charts of the sounds the satellites detected (Node-RED dashboard).

SETUP

Item	What it does
Gateway Configuration	Opens the dialog for your smart home gateway: its IP address (**Discovered Gateways** lists the ones found), user name and password where needed, and the connection **Status**. After a change, allow up to two minutes.
Satellites	Jumps to the section **SATELLITES**.
Select Voice	Opens the dialog to choose the Maestro's voice. **Say it !** plays a test. Option: send spoken answers to the SONOS speaker in the same room.

NODE-RED

Item	What it does
Open flow editor	Opens the Node-RED editor in a new tab.
Open Dashboard	Opens the Node-RED dashboard.
Node-RED library GitHub	Opens Aragon's library of Node-RED examples.
Reset Node-RED	Restarts Node-RED (**Restart**) or installs it again (**HARD reset**). A hard reset can also erase all settings except the gateway.
Set Node-RED password	Sets the Node-RED password back to the factory default.

SYSTEM

Item	What it does
About & Updates	Opens the page with the software versions and updates (see below).
Remote Connection	Jumps to the section **REMOTE CONNECTION**.
Aragon Control MCP	Jumps to the section **ARAGON CONTROL MCP**.
Support access	Jumps to the section **SUPPORT ACCESS**.
Cloud AI	Jumps to the section **CLOUD AI**.
Aragon AI Chat	Opens the Aragon chat in a new tab. With cloud AI on, the chat can also switch devices and, when turned on under **MCP Servers**, check the Maestro.
Talk to Home	Opens a page where you type or speak a command (voice input works in Chrome, Safari and Samsung Internet). It shows how the command was understood.
Vikunja To-Do App	Opens the to-do and reminder app.
Netdata Dashboard	Opens live charts of the Maestro's processor, memory and network.
Logfiles	Shows the Maestro's log files.
Reboot Aragon	Restarts the Maestro after you confirm. It takes a few minutes until Aragon is ready again.

Item	What it does
Power-off	Shuts the Maestro down after you confirm. Wait until the red power LED (PWR) is completely off (up to 3 minutes) before you unplug it.

HELP and LANGUAGE

Item	What it does
Help and Documentation	Opens Aragon's guides and videos, stored on the Maestro.
HeyAragon.com	Opens Aragon's website.
find.HeyAragon.com	Finds Maestros in your network.
LANGUAGE	English, Français or Deutsch: the language of the page. If it differs from the voice assistant's language, the page shows a warning, because some features then do not work properly.

The page, from top to bottom

Section	What you find there
Left column	**About** (privacy), **Technology** (one Maestro and 1-10 satellites, WL or PoE, all in the same network).
START	Reminder: give your rooms and devices proper names in the gateway, so they can be controlled by voice.
MAESTRO	How to install the Maestro, then **Configuration of Gateway**: the **Gateway Configuration** button and the connection state, **Select Voice**, and **Train new words** for new device or room names.
SATELLITES	Setting up satellites (see below).
USE	How to speak to Aragon (wake word, a short pause, then the command) and the list of voice commands, with videos; below it the AI assistant for questions, tasks and reminders.
TROUBLESHOOT	**Restart Voice App**, **See what's heard**, **Set rapid or thoughtful**, **Fine-tune Recognition**, and **Download** for the log files.
HOME AUTOMATION RULES	**Manage Rules** and **Location Settings** (see below).
SUPER SCENES	The four Super Scenes and **Reset Super Scenes** (see below).
REMOTE CONNECTION	**Enable Remote Connection** / **Disable Remote Connection** (Tailscale; sign up for a free Tailscale account first), and other subnets to reach from away (CIDR, for example `192.168.9.0/24`) with **Save**.
ARAGON CONTROL MCP	Lets an AI assistant such as Claude or ChatGPT control your home. The connection address with **Copy**, the service with **Restart Service**, **Start Service** or **Stop Service**, the **Setup Guide**, the **Owner password** (what you type on the Maestro's sign-in page, not your Claude or ChatGPT password) and **Republish Address**. Needs **Remote Connection**.
SUPPORT ACCESS	Lets an AI assistant check your Maestro for problems; it can only read. **Turn on for 48 hours** (with the owner password), **Turn off now**, the connector address with **Copy**, the last access, the line for the Aragon chat, and the **User guide**. While it is on, a banner at the top of every page says so.

Section	What you find there
CLOUD AI	An AI service on the internet (Scaleway, Paris) that understands and answers voice commands: **Use cloud AI**, **Always use cloud AI**, the **Setup Guide**, the **API key** of your Scaleway account, and **Language and voice**: **Language spoken at home**, **Other languages are also spoken at home**, **Speak in the language spoken at home**, and the **Voice of the language spoken at home** (**Install**, **Use**, **Remove**, **Test voice**).
ONLINE VOICE	A natural voice from KugelAudio, paid by use: **Use the online voice (KugelAudio)**, the **KugelAudio API key**, **Voice per language** (**Use**, **Default**) and **Test**. Everything the Maestro says is then sent to KugelAudio as text.
WEB SEARCH	Internet searches through Mojeek, paid by use with your own key: **Use web search (Mojeek)** and the **Mojeek API key**.
Footer	Open source licences and contact.

Dialogs and pages in detail

Satellites

In the section **SATELLITES**:

1. Connect the satellite (PoE cable, or USB power and Ethernet for the WL model). After about a minute it plays a sound.
2. Click **Refresh Satellites**. The list below shows the satellites found, by IP address.
3. Select a satellite and click **Show Details**. The dialog **Satellite Settings** opens.
4. **Sound Events**: choose the rooms where sounds are detected. It needs at least one satellite whose **Wakeword system** is set to Centralized.

In **Satellite Settings**:

Setting or button	What it does
Room	The room the satellite is in.
Volume	Loudness of the satellite.
Wakeword	The word that wakes the satellite. Choose one whose language matches the satellite's language.
Wakeword system, **Wakeword pronouciation**, **Sensitivity:**	How the wake word is detected.
Single Device Response	Only the first satellite that heard you answers.
Play sound when activated	A beep when the satellite wakes up: wait for it before speaking.
No Visual Feedback	No blue light.
Use DeepFilterNet noise suppression	Better understanding in noisy rooms.
Wi-Fi	Connects the satellite to Wi-Fi (2.4 GHz only).
Open App, **Restart App**, **Reboot**, **PowerOff**	Open the satellite's own page, restart its app, restart it, or switch it off (to start it again, unplug and plug in the cable).
Upgrade	Updates the satellite's software (several minutes, do not interrupt).
Download Wakewords	Loads the available wake words.
Test Audio, **Play a test sound**	Records 5 seconds and plays them back, or plays a test sound.

Super Scenes

The buttons **Good Morning**, **Good Night**, **I'm home** and **I'm leaving** each open a dialog. For each, enter up to three voice commands that run when you say the Super Scene, and if needed a condition (**When**, for example daytime or nighttime). **Restore Default** brings back the original commands of one scene; **Reset Super Scenes** resets all four.

Home Automation Rules

Manage Rules opens the list of rules. **Add New Rule**, type the rule in plain language (for example "Close all shutters at 10 PM on weekends"), click **Validate**, then **Save**. Anything you can control by voice can be a rule; rules repeat, they are not one-time actions. For rules at sunrise or sunset, set your nearest major city under **Location Settings** → **Change**. Write rules in the voice assistant's language.

About & Updates

The page opened from **SYSTEM** → **About & Updates**:

Part	What it does
1. Aragon is up-to-date / **One or more updates are available**	The Aragon update, with **Update**. Do not restart or switch off the Maestro during an update.
2. Voice Application (Action & Logic)	Installs the voice application (**Install**), for example when a new version is shown.
3. Voice Assistant (Natural Language Understanding)	Installs the voice assistant (**Install**), for example to change its language when the page warns of a language mismatch.
4. Change Gateway (Advanced)	Switches to another type of gateway.
5. Forget Gateway (Advanced)	Clears all gateway settings (IP, user names, passwords).
Show/Hide System update	**6. System update**: updates all system files. Only when you have problems.
Show/Hide Piper/TTS Update	Updates the speech output files (large download).
Show/Hide System time	Time zone, network time synchronisation, date and time.
ZRAM Settings	Compressed memory used as swap.
Show/Hide Licences	The open source software used in Aragon.
BACK	Back to the main page.

How do I…?

Task	Where
Restart the Maestro	**SYSTEM** → **Reboot Aragon**, then confirm. If only voice control is stuck, first try **VOICE CONTROL** → **Restart Voice App**.
Switch the Maestro off	**SYSTEM** → **Power-off**; unplug only when the red PWR LED is off.
Change a satellite's wake word	**SATELLITES**: **Refresh Satellites**, select the satellite, **Show Details**, **Wakeword**.
Use a new room or device by voice	Name it in the gateway, then **VOICE CONTROL** → **Train new words**.
See why a command was not understood	**VOICE CONTROL** → **See what's heard**.
Change the Maestro's voice	**SETUP** → **Select Voice**.

Task	Where
Update Aragon	**SYSTEM** → **About & Updates**.
Get the log files	**TROUBLESHOOT** → **Download**, or **SYSTEM** → **Logfiles**.
Reach the Maestro from away	**SYSTEM** → **Remote Connection**.
Control the home from Claude or ChatGPT	**SYSTEM** → **Aragon Control MCP**, and its **Setup Guide**.
Let support or an AI assistant check the Maestro	**SYSTEM** → **Support access** → **Turn on for 48 hours**.
Use an AI service for voice commands	**SYSTEM** → **Cloud AI**, and its **Setup Guide**.
Chat with Aragon	**SYSTEM** → **Aragon AI Chat**.
Change the page language	**LANGUAGE**.
Find the guides	**HELP** → **Help and Documentation**, or doc.heyaragon.com.
